Paper: Security Games with Arbitrary Schedules: A Branch and Price Approach [AAAI'10]

1. Provide an evaluation of each other's summary

It seems to be a good summary of what the algorithm of the paper is in detail. Specifically, he introduces ASPEN by separating the two main algorithms (column generation & ORIGAMIS-S).

2. Discuss the strengths and weaknesses of the paper

Basically, I agree with his idea that ASPEN is faster than any other baseline model. However, he omitted the part of weakness and discussion, so I couldn't evaluate it.
